CE-1004-001	BASIC FACTS ABOUT NATURAL GAS & INSPECTING NG FURNACES (STANDARD OF PRACTICE)	Ever looked at a forced air furnace and wondered what is really going on? How does this thing really work and what are the critical items to be checking during an inspection? Together we will break this complex piece of equipment down to its basic no-nonsense principles. We will start with the fundamentals behind FAU installation and operation, then explore the numerous ways the systems can be installed incorrectly or perform improperly. INSTRUCTOR: Mitch Sudy	11/20/07	1.5
CE-1004-002	MOISTURE INTRUSION (STANDARD OF PRACTICE)	This session covers the many modalities of moisture transmission into residential structures from vapor to bulk moisture and their evidences of manifestation. The discussion will also expand to several case studies and defect recognition. INSTRUCTOR: Mike Casey	11/20/07	1.5
CE-1004-003	STRUCTURE (STANDARD OF PRACTICE)	This session will cover the basics of residential structures from the soil to the ridge board. The discussion will include components of residential structures, defect recognition and typical reportable conditions found in the field. INSTRUCTOR: Mike Casey	11/20/07	1.5
CE-1004-004	ELECTRICAL INSTALLATION & CONNECTIONS (STANDARD OF PRACTICE)	This session will include safe practices, standards of practice requirements, the difference between service grounding and equipment grounding and acceptable wiring methods, especially non-metallic sheathed cable requirements, current industry safety components such as GFCI and AFCI and what the future holds for these safety components because changes are on the horizon. Minimum electrical service requirements, proper installations and common defects will also be discussed. INSTRUCTOR: Mike Hart	11/20/07	1.5
